

bimap::bidirectional
_map::at

bimap::bidirectional
_map::contains

bimap::bidirectional
_map::emplace

bimap::bidirectional
_map::find

```
graph LR; A[bimap::bidirectional_map::at] --> D[bimap::bidirectional_map::find]; B[bimap::bidirectional_map::contains] --> D; C[bimap::bidirectional_map::emplace] --> D;
```

The diagram illustrates a relationship between four methods of the `bimap::bidirectional_map` class. On the left, three white rectangular boxes are stacked vertically, each containing a method name: `bimap::bidirectional_map::at`, `bimap::bidirectional_map::contains`, and `bimap::bidirectional_map::emplace`. On the right, a single gray rectangular box contains the method name `bimap::bidirectional_map::find`. Three blue arrows originate from the right side of the three white boxes and point towards the left side of the gray box, indicating that the `at`, `contains`, and `emplace` methods are related to or perhaps delegate to the `find` method.
